

Software Engineer - Full-stack Developer

Paid, Full-time

Washington, D.C.

Agnes

We are building a mobile/web campus way-finding application that actively matches students to events, groups, projects, and like-minded peers in a community based on interests, skills, and goals. Our purpose is to increase community engagement by connecting students to the experiences they are looking for. We believe that every person should have the opportunity to have meaningful interactions with others, grow as an individual, and make an impact, and it's our goal to make that happen.

Your Role and Impact

Our team's focus goes beyond the Agnes app — we care about the quality of community as it relates to everyone's experience. You will be called on to make fundamental technical decisions that directly impact our team, product, and company. If you have drive, passion, a strong team orientation, and a desire to see the direct results of your efforts, this is the role for you!

Responsibilities

- Stabilize and optimize Agnes on a technical level
- Design and implement backend architecture for scalability
- Write scripts for automated backend testing
- Work directly with a small, interdisciplinary team
- Craft the direction of current and future products

Requirements

- Passion for our mission of creating more engaged communities
- Strong software engineering background with experience in the following:
 - Node.js
 - Angular.js
 - MongoDB
 - Python
- A love for the challenges of building a stable, scalable, and user-friendly mobile experience
- Enjoyment of keeping up-to-date with the latest trends in the mobile-first world
- Flexibility, openness to new ideas, and ability to quickly implement changes when needed
- Knowledge of the Ionic Framework is a plus

Benefits and Perks

- \$0 employee premium, company-paid individual medical, dental, & vision insurance coverage
- Flexible working hours
- Remote working options
